(54) LIQUID CRYSTAL DISPLAY DEVICE

(57) Abstract

PURPOSE: To easily and certainly position a light quantity correcting member by providing protruding sections, snap holes, and long holes to the member.

CONSTITUTION: In a liquid crystal display device provided with a cold cathode ray tube 3 and light quantity correcting means 1, plural protruding sections 7 are provided to the member 1 and snap holes or long holes are formed at the inside of the protruding section 7. When the protruding sections 7 are formed, grooves 9, in which the protruding sections 7 are put at the time of positioning the member 1, are formed on a reflecting plate 2. Moreover, since the protruding sections 7 are provided at the central part of the member 1 in the longitudinal direction, the positional deviation between a light quantity correcting pattern 8 and the cold cathode ray tube 3 provided at the lower section can be minimized against the longitudinal extension and contraction of the member 1. Therefore, the light quantity correcting member 1 can be positioned easily and certainly at the time of assemblage and, at the same time, the positional deviation of the member 1 caused by the extension and contraction of the member can be prevented.
